### Notes:

- <sup>1</sup> Includes GHG inventory emissions from on-site fuel combustion and purchased electricity, waste disposed, waste recycled and water used at SPX's manufacturing and assembly facilities. Office locations are not included.
- <sup>2</sup> GHG inventory data for 2019 includes the acquisition of SGS; 2020 data includes the acquisitions of Patterson-Kelley and Sabik; 2021 data includes the acquisitions of ECS, ULC, and Sensors & Software; and 2022 data includes the acquisitions of ITL.
- <sup>3</sup> Scope 2 purchased electricity is calculated using both location-based and market-based methodologies per the Global Greenhouse Gas protocol (<https://ghgprotocol.org/corporate-standard>). The scope 2 location-based method reflects the average emissions intensity of grids on which energy consumption occurs by using grid-average emission factors. Residual mix emission factors were used to calculate market-based emissions. Emission totals are calculated using location-based emissions.
- <sup>4</sup> Waste, recycling, and water data for 2020 includes the acquisitions of Patterson-Kelley, SGS and Sabik; 2021 data includes the acquisitions of ECS, ULC, Sensors & Software; and 2022 data includes the acquisitions of ITL.
- <sup>5</sup> New acquisitions are included in the safety data in the month following their acquisition date.
